SUSTAINABILITY SNAPSHOT

INTERNAL NOISE LEVELS

INDOOR ENVIRONMENT QUALITY

Holding training sessions in-house means we need to control noise throughout the office, as offices with good acoustics support better productivity. WSP created a detailed plan for the acoustic design of the office and wall system that divides our main meeting rooms. A Temperzone unit operates very quietly to ensure we meet noise level standards required by Green Star. We also installed a Wavebar acoustic lining above our meeting-room ceilings to further manage internal noise.
