SUSTAINABILITY SNAPSHOT

LIGHTING CONTROL

ENERGY

We re-designed lighting for increased control, flexibility and energy savings, removing many of the 56 light fittings to end up with 20 fittings. Lights are grouped into individually switched, easily identifiable zones and the switches are accessible for all staff. We also installed presence detectors in all areas to save energy; new lights are either high-efficiency T5 lights or LEDs. Many businesses can cut up to 40% off their lighting costs by using more efficient lighting.
